

## **Telehandler Certification Tolleson**

Telehandler Certification Tolleson - Telehandler certification courses are both for operators who have some experience driving a standard forklift and for people with no experience. The real-world training provided by these courses produces graduates who know the safe and right utilization of these types of equipment.

Telehandler certification courses are offered in two forms: at a training facility; at the job site of the trainee. With the former alternative, the manufacturer can work with a licensing agency to bring individuals to a training facility. This option provides trainees with the opportunity to learn to utilize the machinery in a controlled environment. Upon completion, participants are given a license or certification to use this kind of machinery.

When the training is performed on the worksite, a skilled instructor is sent to the work place. This is the best way to make certain that your staff receive specific training on the equipment that they would be utilizing, helping to train the trainee in their own work environment. Trainees learn about potentially dangerous cases which can occur on the actual work site. The instruction focuses on whichever conditions that are specific to the work place, enabling operators to be prepared to handle these elements more safely.

The term "telehandler" is an abbreviated version of "telescopic handler," meaning an equipment that has an extending or telescoping arm supporting a fork. A telehandler has various controls and characteristics just like a forklift. A telehandler has the capability of transporting and lifting loads up and away from the vehicle. Improper use of telehandlers can result in serious accidents. If load restrictions are exceeded, the equipment could tip due to excess weight on the lift. It is the task of the operator to know load limitations and to safely utilize these machines.

Telehandler programs designed for operators who are already certified to make use of a forklift are referred to as "conversion" classes. These classes teach the differences between telehandlers and forklifts, and avoid repeating information which forklift operators already know. For trainees who have no prior experience making use of telehandler machines, training consists of the basic operation and utilization of the equipment. Some groups offer refresher programs also.
