

## Linde Forklift Parts

Linde Material Handling focuses in manufacturing forklifts and warehouse equipment. It is one of the largest manufacturing companies on the planet. For over 5 decades, the company has been raising the bar for fleet management, industrial trucks, high performance material flow solutions and driver assistance systems. Linde has invented a diverse set of equipment designed to take care of individual customer needs.

As one of the world leaders in manufacturing warehouse equipment and forklift trucks, the firm operates in Europe as part of the Linde and Fenwick brands. Joining the KION Group in 2006, Linde is among one of the leading suppliers for Intralogistics by providing automation solutions. The KION Group is additionally the second largest manufacturer of industrial trucks across the world.

Operating in over 100 countries around the world with its' own branches, Linde is widely represented within the industry. There are assembly and production facilities in China, Germany, the Czech Republic, France and the USA, along with over 700 service and sales retailers. The company's fleet is really expansive. There are approximately 80 series with roughly 9000 equipment options and up to 20 model variants. Linde manufactures the fleet and their vehicles specifically customized to their end users needs.

Linde also creates high-performance options for intralogistics with warehouse equipment, electric and diesel forklifts, automation solutions, fleet management software, financing options and driver assistance systems. The business offers extensive operator training and forklift services.

There have been many advancements in automation, digital networking and the demand for more specific equipment across a number of industries; contributing influences that are driving technological improvement within the intralogistics realm. Linde Material Handling strives to help its' clients meet and exceed their material management challenges. Customer care is paramount at Linde. In fact, there is no product considered off the shelf. The company only implements technological innovations if they offer its' customers with a sustainable advantage.
